

# Composite Solutions Thermal Boost

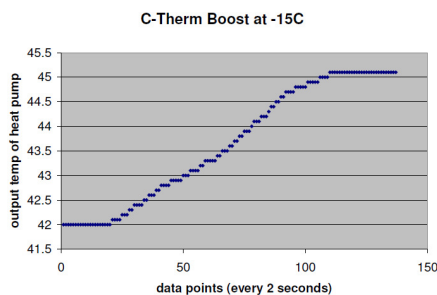

*We make heat pumps work better!*

Our first generation patent pending thermal boost is designed to improve the performance of air source heat pumps at temperatures below  $-10^{\circ}\text{C}$ . This is accomplished by preheating the ambient air back to the temperature where your heat pump works more efficiently.

## Benefits of Ctherm Boost:

- Higher heating performance at colder temperatures (as much as 30% increase)
- Reduced outdoor coil ice-up
- Shorter defrost times
- Increased cooling performance at high temperatures
